

Product End-of-Life Disassembly Instructions

Product Category: Networking Equipment

Marketing Name / Model

[List multiple models if applicable.]

HP Adv Srvs zl Mod w_vSphere Platform / J9748A

Purpose: The document is intended for use by end-of-life recyclers or treatment facilities. It provides the basic instructions for the disassembly of HP products to remove components and materials requiring selective treatment, as defined by EU directive 2002/96/EC, Waste Electrical and Electronic Equipment (WEEE).

1.0 Items Requiring Selective Treatment

1.1 Items listed below are classified as requiring selective treatment.

1.2 Enter the quantity of items contained within the product which require selective treatment in the right column, as applicable.

Item Description	Notes	Quantity of items included in product
Printed Circuit Boards (PCB) or Printed Circuit Assemblies (PCA)	With a surface greater than 10 sq cm	1
Batteries	All types including standard alkaline and lithium coin or button style batteries	0
Mercury-containing components	For example, mercury in lamps, display backlights, scanner lamps, switches, batteries	0
Liquid Crystal Displays (LCD) with a surface greater than 100 sq cm	Includes background illuminated displays with gas discharge lamps	0
Cathode Ray Tubes (CRT)		0
Capacitors / condensers (Containing PCB/PCT)		0
Electrolytic Capacitors / Condensers measuring greater than 2.5 cm in diameter or height		0
External electrical cables and cords		0
Gas Discharge Lamps		0
Plastics containing Brominated Flame Retardants		0
Components and parts containing toner and ink, including liquids, semi-liquids (gel/paste) and toner	Include the cartridges, print heads, tubes, vent chambers, and service stations.	0
Components and waste containing asbestos		0
Components, parts and materials containing refractory ceramic fibers		0

Components, parts and materials containing radioactive substances		0
---	--	---

2.0 Tools Required

List the type and size of the tools that would typically be used to disassemble the product to a point where components and materials requiring selective treatment can be removed.

Tool Description	Tool Size (if applicable)
Torx Screw Drivers	T-6, T-8, T-10, Box type
Phillips Screw Driver	

3.0 Product Disassembly Process

3.1 List the basic steps that should typically be followed to remove components and materials requiring selective treatment:

1. Remove the CF card on the PCA. Refer to Pic.1 (a)
2. Using the Phillips screw driver, removes the 4 Phillips screw attaching the hard drive to the PCA. Refer to Pic.1 (b)
3. Remove the 4 screws that attached the brackets to the hard drive using a T-8 screwdriver. Refer to Pic.2 (c)
4. Remove the plunger that attached the Com-E module into the PCA using a T-10 screwdriver. Refer to Pic.3 (d)
5. Remove the 4 standoffs that attached the Com-E module onto the PCA using the Boxtorx screwdriver. Refer to Pic.3 (e)
6. Remove another 1 standoff, using the Boxtorx screwdriver. Refer to Pic.3 (f)
7. Remove the Com-E module.
8. Remove the bulkhead by removing the 5 screws securing the bulkhead onto the PCA. Remove 3 screws using the T-6 screwdriver [Pic.4 (g)] and another 2 screws using the T-10 screwdriver [Pic.4 (h)]
9. Remove two screws and springs on the bulkhead. Refer to Pic.5 (i)
10. Remove the 4 screws that attached the heatsink onto the PCA using the T-10 Torx screwdriver. Refer to Pic.6 (j)
11. Remove the guide pin by using a T-10 Torx screwdriver to remove the 1 screw that attached the guide pin to the PCA. Refer to Pic.6 (k)
12. Remove the 3 standoffs via bottom 3 screws using the T-10 screwdriver. Refer to Pic.6 (m)
13. Remove the 5 standoffs via bottom 5 screws using the T-8 screwdriver. Refer to Pic.7 (n)
14. Remove the solder-anchor heatsink (towards right of PCA when looking from front) by releasing the catch from the 2 anchors. Refer to Pic.8 (o)

- 16.
- 17.
- 18.
- 19.
- 20.

3.2 Optional Graphic. If the disassembly process is complex, insert a graphic illustration below to identify the items contained in the product that require selective treatment (with descriptions and arrows identifying locations).

Pic	Illustration
1	 A photograph showing the top view of a laptop drive assembly. A silver metal bracket is mounted on a green printed circuit board (PCB). A 4.0 SATA drive is installed in the bracket, labeled 'a'. Four screws are visible, labeled 'b'. A small black component is labeled 'c'.
2	 A photograph showing the bottom view of the same laptop drive assembly. The green PCB is visible, with a central circular cutout. Four screws are visible, labeled 'c'.

3		
4		

5	 A photograph of a white, rectangular GNE Services Module. The module has a carrying handle on top. On the front panel, there are several status indicators labeled "Power", "Ready", "Standby", "Fault", and "Service". There are also two blue "i" icons, one on the left and one on the right side of the front panel. The text "GNE Services Module" is printed on the top left of the front panel.	
6	 A photograph of a green printed circuit board (PCB) populated with various electronic components. Several components are highlighted with black boxes containing white letters: "k" is used for three different components (top right, middle left, and bottom right), "j" is used for three different components (middle center, middle right, and bottom center), and "m" is used for one component (bottom right). The board has various connectors, capacitors, and integrated circuits.
