P14	Additional information
P10	<i>Acoustic noise information published on the ECMA 370 The Eco Declaration represents a typically configured product base model only. If optional items with moving parts are added, like extra hard disks or graphic cards with fans etc, these can change acoustic noise values for which HP can take no responsibility.</i>
P9	<p>Power Consumption</p> <p>There are two useful tools for energy consumption calculation: HP Enterprise Configurator at: http://h30099.www3.hp.com/configurator/ HP Blade System Power Sizer http://h71019.www7.hp.com/ActiveAnswers/cache/347628-0-0-225-121.html?jumpid=reg_R1002_USEN Both these provide, among many things, the power demand for the specific configuration entered.</p> <p>In general, HP avoids declaring energy values for servers for the following reasons:</p> <ol style="list-style-type: none"> (1) there are numerous shipped configurations for each form factor, (2) the low energy state of the server depends on the operating system used and how it is configured, (3) servers tend to be ON and in use when unattended and their power consumption is a function of the varying demands placed on the server, and (4) requirements for servers are not defined by Energy Star or Blue Angel.
