Overview

ARCserve 6.5 for Windows NT combines leading edge performance, automation and management to set the standard for Windows NT backup. Optional tape RAID and Image backup options add to the reliability and performance of ARCserve. Combined with other features, such as parallel streaming, ARCserve is today's high performance backup solution. The automatic media management feature provides automated media rotation, media pooling and more. An optional autochanger module, that now supports bar codes, enhances an automated backup scheme.

ARCserve provides added manageability with a comprehensive alert system, centralized administration, remote management, and extensive reporting. Application agents provide backup of Microsoft SQL Server Oracle Server, SAP R/3, and Microsoft Exchange Server. ARCserve 6.5 extends backup protection to a complete set of clients that includes Windows NT, NetWare, UNIX, Windows 95 and 3.x.

Key Features

ARCserve 6.5 for Windows NT provides powerful new features:

- Remote installation of options and agents
- Built-in data migration
- Data encryption
- Data compression
- Unicenter TNG Framework
- Remote Disaster Recovery Option
- "Virtual" Library Changer Option

Competitive Advantage Across the Market

- **User Definable Tape Rotation**
In addition to Grandfather-Father-Son tape rotation, customizable rotation can be configured.
- **Fault Tolerance**
Using RAID Level 5, data is striped across multiple drives in the RAID array and produces parity redundancy on the tapes in the array. If a drive should fail during the operation, the backup/restore will continue with the remaining drives in the array. If a medium has errors, the entire job can be recovered from the tape set. RAID Level 1 provides tape mirroring. A copy of the tape can be taken off-site for disaster protection.
- **Image Backup/Restore**
High speed image backup/restore can be achieved by writing a volume image to tape, rather than backing up the volume file by file.
- **Application Backup for Microsoft Exchange**
Online backup/restore can be achieved by writing a volume image to tape, rather than backing up the volume file by file.
- **Disk Copy Operations**
Selected directories/files may be mirrored for protection or for data exchange.
- **MDI Compliant**
ARCserve is fully Multiple Document Interface (MDI) compliant, so multiple windows can be open simultaneously, allowing concurrent management of several operations.
- **Built-in AntiVirus**
Data is scanned for viruses immediately before backup so backup will be virus free. Copy and count operations provide an added measure of security.
- **Comprehensive Alert Notification**
Event and job based messages can be sent to designated targets and routed via pager, Microsoft Exchange Server, print queue (trouble ticket), SNMP traps, event log, and network broadcast.
- **Global Job Queue Management**
Greater manageability and flexibility is achieved with the tree view, which is similar to explorer, and property dialog.
- **Library Changer Option**
Ability to create up to a "virtual" library of up to 16 Compaq DLT Libraries with a total of 32 drives, providing up to 3.6 TB of unattended backup and restore capacity. In conjunction with the RAID Option, up to 4 Compaq DLT Libraries with a total of 8 drives can be configured in a RAID 0, 1, or 5 fault tolerant mode.

SPECIFICATIONS

System Requirements

Hardware:

Windows NT Server or Workstation with Intel x86 Certified Device - supports all Compaq tape drives including DAT Autoloaders and DLT Libraries.

Software:

Windows NT Server or Workstations v 3.51 or later.

SOFTWARE OPTIONS

Client Agents

Backup/restore for complete set of clients

Windows NT, Windows 3.1x, Windows 95, NetWare
