

### QuickSpecs

## Introduction

Apache Web Server, the world's most widely deployed Web (HTTP) server, will be available as of July 1999 on OpenVMS Alpha and VAX. As of July 1998, over 1.2 million Internet servers are powered by Apache.

OpenVMS customers, familiar with Apache on other platforms, can now take advantage of the development power of this open source software community and deploy a robust, high-performance, full-featured Web server that enjoys an unparalleled level of testing and deployment.

---

## Highlights

- Customers running OpenVMS Alpha or VAX V7.1 or later, and TCP/IP Services for OpenVMS V5.0, or later can download Apache, the world's most popular Web server, from the OpenVMS home page at no cost after July 1999
  - Used for building, publishing and serving Web pages and applications
  - Support provided by Compaq
- 

## Benefits

- Take advantage of the Web server developed by a worldwide community of users.
- 

## Product Features

### Key Features

- Support for the latest industry-standards, including HTTP/1.1 protocol and CGI/1.1
- Simple, yet powerful file-based configuration that can be easily customized
- Integrated perl, proxy server
- Support for Server Side Includes (SSI) and Java Servlets

### Advantages

- World's most widely deployed Web server now runs on OpenVMS Alpha and VAX
- 

## Software Requirements

Apache V1.3.4 for OpenVMS Alpha and VAX requires OpenVMS V7.1 or later and TCP/IP Services for OpenVMS V5.0 or later.

---

## Hardware Requirements

OpenVMS Alpha system with minimum 64 MB

---

## QuickSpecs

### Compatibility

#### Workstations and Servers

Apache V1.3.4 for OpenVMS Alpha and VAX will install and run on any OpenVMS Workstation or Server that supports OpenVMS Version 7.1 and beyond.

Apache V1.3.4 for OpenVMS Alpha and VAX will be downloadable from the Compaq website after July 1999.

The hardware and software requirements are the same as the OpenVMS operating software requirements.
