

HPE NonStop Web ViewPoint Enterprise software

HPE NonStop Web ViewPoint Enterprise software allows you to perform automated operation management on your HPE NonStop systems

Comprehensive analysis provides a means to better understand normal application and system behavior, and therefore is an important knowledge source to more effectively and proactively manage your HPE NonStop systems. You need to have continuous and effective monitoring and management of your software and hardware entities to maintain availability.

Web ViewPoint Enterprise offers an automated operation management solution for HPE NonStop systems. It is based on a device and browser independent platform, and uses a secure distributed architecture. This means that users can access from anywhere, and from any device, to securely manage and monitor their HPE NonStop systems.

Automation is at the heart of Web ViewPoint Enterprise. From an array of over 48 resource components, it can notify users of exceptions the moment they happen, and take immediate action to help resolve them. Using a smart calendar based algorithm, it can be tailored to implement different automation and reaction policies for different times and weekdays. In other words, users can tailor the automation features to suit their business requirements.

HPE NonStop Web ViewPoint Enterprise is a web browser-based product. No client application needs to be installed or maintained, and applications do not need to be coordinated across multiple workstations. This means that you can run the software on a variety of platforms and operating systems.

Optionally, Web ViewPoint Enterprise can maintain an active and integrated link to HPE's Remote Analyst cloud based solution. This enables users to analyze the full history of system components at a click of a button. This all happens while users' business and applications remain unaffected on their HPE NonStop system.

HPE NonStop Web ViewPoint Enterprise utilizes a browser (IE, Firefox, or Chrome™) interface, which makes it light and easy to access from any device. It is easy to use, and nearly anyone can efficiently use Web ViewPoint Enterprise within the first hour or two.

Remote Analyst employs sophisticated machine learning algorithms to learn from past system behavior and forecast future requirements and expected utilization. This information is then shared with Web ViewPoint Enterprise to employ an intelligent operation and alarm logic. It is as if your business had an expert HPE NonStop analyst who knows all about your applications and systems, monitors them 24x7, and when needed, can take actions at a fraction of a second.

Event management

Web ViewPoint Enterprise's Event Management module helps with monitoring real-time EMS events from one or multiple EMS collectors running on one or more HPE NonStop servers. It facilitates viewing all messages on a single window or multiple windows side by side. Event viewing and various management features are easy to use and configure. Event selection criteria and methods are extensive and support a complete range of options.

Operations management

The Web ViewPoint Enterprise operations management toolset allows you to monitor and manage a multi-node HPE NonStop system environment from a single point. It simplifies the underlying HPE NonStop operational toolset syntax requirements through easy-to-use point-and-click command and control features.

Payment apps monitoring

With the new payment applications monitor plug-ins, HPE NonStop Web ViewPoint Enterprise Base24 Monitor and HPE NonStop Web ViewPoint Enterprise Connex Monitor, payment applications can be monitored from a single Web ViewPoint Enterprise pane. Users can create their own profile of payment metrics and how they want to view them. These profiles, based on user selection, can be shared across the organization. Each user can dynamically modify, select, and choose their own dashboard.

Furthermore, alert conditions can be defined on any of the available application metrics using the Web ViewPoint Enterprise user interface. When issues are encountered, based on the settings, Web ViewPoint Enterprise's notification platform will perform any or all of the following: alert staff via text and email, export details out to central solutions (e.g., ServiceNow) and/or take user defined automated actions can be taken to recover. All actions and details are logged for future reviews.

Performance monitoring

The performance monitor provides an online subsystem that monitors continuously and enables you to receive and display current performance metrics. In short, it puts together the performance metrics on all your HPE NonStop systems in a summary format providing the real-time health of the neighborhood. Performance summary and detail page displays all of information ranging from CPU performance, process, disc, HPE NonStop Transaction Management Facility (TMF) metrics. CPU monitoring provides a color-coded busy condition and a drill-down feature that provides details for problem analysis on bottlenecks and response-time issues.

Technical specifications

HPE NonStop system	HPE NonStop system running the HPE NonStop Operating System L19.03 onward or J06.23 onward
Hardware	PC with minimum of 2 GB of RAM (3 GB or more is recommended)
Software	Windows 2012 Server or later, Windows 10, Windows 7, Microsoft Internet Explorer 11, Edge, Google™ Chrome, Mozilla Firefox

Training and education

Gain the skills you need with training and certification from Hewlett Packard Enterprise. With HPE NonStop training, you accelerate your technology transition, improve operational performance, and get an excellent return on your HPE investment. Our training is available when and where you need it, through flexible delivery options and a global training capability. More trainings and webinars can be found at nonstop-academy.com.

HPE Pointnext Services

Leverage one of the most comprehensive support solutions tailored to meet your specific data center support requirement. HPE Pointnext Services offers a wide choice of proactive and reactive service levels covering requirements ranging from basic to complex business-critical environments. For more information, see: [HPE Contractual Support Portfolio for HPE NonStop servers](#).

HPE Financial Services

Creating investment capacity to accelerate digital transformation

HPE Financial Services helps organizations create the investment capacity they need for digital transformation, in an innovative and sustainable way. HPEFS partners with Customers to develop a playbook for their entire IT asset portfolio (from edge to cloud to end user), one that is unique to their aspirations and size. Our financial and asset management solutions are anchored by best-in-class tech upcycling services. For more information, visit: hpe.com/us/en/services/financial-services.html.

Supplemental terms

The following supplemental terms apply to these services and take precedence in the event of any conflict:

- Upon receipt of an acceptable order, HPE will contact the Customer within seven (7) business days to organize a service delivery date. Service delivery dates are subject to resource availability and may be scheduled up to 30 days from the order acceptance date.
- The Customer must schedule and receive delivery of these services within 180 days from order acceptance. HPE reserves the right to reprice for services not scheduled and delivered within 180 days. Backorders or shipment delays may affect the delivery timeline. Orders for services will expire after 365 days (one year) from the order acceptance date for services not scheduled and delivered, and the Customer will not be entitled to a refund for the unused services.
