

HPE AND STROMASYS

HPE ProLiant Servers & Charon software

Working together. Accelerating results.

A NEW STYLE OF PARTNERING

Hewlett Packard Enterprise and Stromasys are collaborating in a fresh new way to bring increased value to customers like you.

We know that acquiring technology is only the first step in achieving a business goal. The technology pieces need to work together. They need to be tested. They need to provide rich functionality, quickly and effectively, so you can concentrate on your business needs.

To help satisfy these needs, Stromasys is a member of the HPE Partner Ready for Technology Partner program, an industry-leading approach to supply sophisticated integrated technologies in a simple, confident, and efficient manner.

Stromasys has access to the right tools, processes, and resources to help our joint customers accelerate innovation and transformation that brings value, achieves business needs, and increases revenue and market share.

PRODUCT OVERVIEWS

Charon software: Charon software runs as an application on an x86 Linux® or Windows host (or VM), in the cloud, or as a bare metal installation. An image backup and restore of the legacy OS, data, and applications are moved to new storage. In some cases where modern SAN storage is used by the legacy hardware, direct connections can be made from the new hardware and no data has to be moved. The Charon software configuration process maps the physical/virtual resources seen by the host server or VM.

Product brochure

The Charon software acts as a translation layer between the legacy OS and the new hardware by emulating the proprietary chipset technology of DEC VAX, DEC Alpha, PDP-11, and Sun SPARC systems. Charon performs dynamic instruction translation for CPU, networks, storage, and other hardware, faithfully producing x86 functional code from legacy commands and vice versa.

HPE ProLiant Servers: HPE provides a broad server portfolio to run diverse workloads that are centered on business outcomes and provide consistent agility, security, and economic control across hybrid IT. HPE ProLiant Servers support embedded server management capabilities that give you complete control of your IT infrastructure. HPE Integrated Lights-Out (iLO) allows you to configure, monitor, and update your HPE servers seamlessly from anywhere in the world. Featuring the latest innovations in simplified operations, performance and security, HPE iLO allows you to manage your entire server environment with ease.

COMPANY OVERVIEW

About Stromasys

Stromasys is a pioneer in enterprise-class cross-platform legacy server emulation solutions, providing modern infrastructure for legacy applications. The company was founded in 1998 as a management buyout of the DEC European Porting and Migration Center and split off as a separate company during the DEC-to-Compaq sale. This group of engineers created the Charon line of products, which enables companies to replace aging legacy hardware with an industry standard x86 server without changing or recompiling their software applications.

Founded in 1998 and headquartered in Geneva, Switzerland with sales, engineering, and research and development offices located around the world, Stromasys has implemented cross-platform virtualization solutions in over 70 countries to help organizations lower costs, protect their investments, improve performance, reduce risk, and provide easier maintenance.

About Hewlett Packard Enterprise

Hewlett Packard Enterprise is a global technology leader focused on developing intelligent solutions that allow customers to capture, analyze, and act upon data seamlessly from edge to cloud. HPE enables customers to accelerate business outcomes by driving new business models, creating new customer and employee experiences, and increasing operational efficiency today and into the future.
