

Modernize healthcare and attract investments for your IT strategy

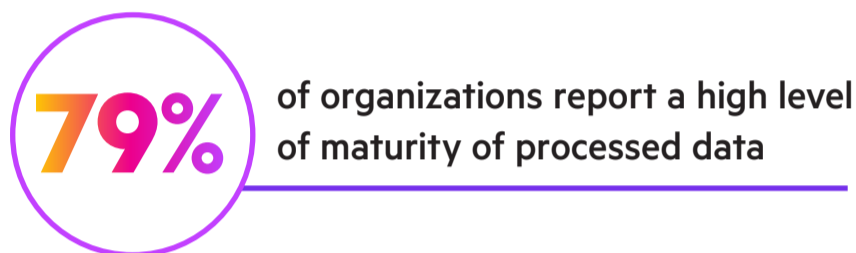

» **Digital Transformation** based on IDG survey results conducted end 2022 among C-level healthcare representatives in Europe

Strategic priorities:

Arguments for moving data to the cloud

Benefits of technology as a service

IT subscription, a flexible and complete solution

Combine hardware, software, and other complementary services through this subscription-based model that gives you access to the latest and greatest technology, while helping you optimize your IT budget and simplify your billing.

A sustainable option

It is common for organizations to find themselves with more IT resources than they really need, resulting in higher costs and unnecessary consumption. With flexible IT subscription, over provisioning is reduced, you'll have access to the technology you really need and avoid wasting resources.

Forget about large capital investments

Enjoy the latest innovations in technology, as well as the training and equipment maintenance you need, through a low-cost subscription that can be paid on a monthly or quarterly basis.

Reduce IT security risks

The need for greater mobility and collaboration within businesses brings with it new security challenges leading to increased IT vulnerabilities. Continually renewing your technology means you'll have the latest security advances, helping to reduce your IT risks.

» **Technological opportunities to migrate**

» **Transforming healthcare from edge to cloud**

Quantified/digitized self

The quantified self is a trend that has driven new consumer electronics over the last few years, and puts the data, and feedback into the patients' hands, allowing them to focus on their own wellness. This is the far edge.

Connected medical devices

Connected medical devices are in patients' homes and at bedsides monitoring vital signs and feeding data in the patient's health record. This is the edge.

Tele-healthcare

Tele-healthcare solutions, enable patients and clinicians to share data between themselves and into their communities to enable a richer patient care experience. Patients can use their own data to monitor the change and care for themselves. This brings the edge and the cloud together.

Clinical efficiency

This next silo is mostly for inpatients care, documentation, and workflow management. Think about these huge workloads Electronic Medical Record, where the intuition and expertise are combined with all this collected data. This is the hybrid cloud.

Precision medicine

All this data is moving into huge pools of data, where we can start to make healthcare more precise, more personalization, but also provide the insights at the populations level, for policy and decision-makers.
