Patch 135-017-00 Release Notes for StoreVirtual OS Version 13.5

Part Number: P00713-001
Published: August 2017
Edition: 1

Release notes

Description

This patch resolves a failure in the Restore Peer process that results in the following error message:
Error: The operation failed: One or more components needed are not present on the system. The Restore Peer process is used to reassociate controllers following the maintenance or replacement of one controller.

ⓘ **IMPORTANT:**

- Before installing the patch, ensure that you have upgraded to StoreVirtual OS version 13.5.
 - Installing the patch restarts all StoreVirtual OS application services. However, the storage system is not restarted.
 - Performance disturbances and iSCSI connection disruptions can occur while the StoreVirtual OS services are restarting. Always follow the best practice of upgrading the Virtual IP (VIP) storage system last.
-

Versions

- HPE StoreVirtual OS 13.5 patch 135-017-00
- StoreVirtual Management Console 13.5.00.0793
- HPE StoreVirtual DSM for Microsoft Windows MPIO version 13.5.0.39. To ensure that DSM assigns paths properly, you must first install patch 135-015-02, patch 135-016-00, and then 135-017-00.

Update recommendation

Critical.

As a best practice, Hewlett Packard Enterprise recommends upgrading software during times of non-peak activity to minimize any potential application impact.

Product models

- StoreVirtual 3200
- StoreVirtual 3200 FC

Fixes

This patch resolves an issue that prevented the configuration backup for the Restore Peer process.

Installation instructions

Storage system reboot required: No

Storage services restart required: Yes

1. Log in to the StoreVirtual Management Console (SVMC) on the system you want to update.
2. On the main menu, select **Software Updates**.
3. Select **Actions > Install** on the content pane.
4. Select **Patches**.
5. Select the patch you want to install.

6. Click **View volume availability**.
 - a. On the **View Volume Availability** dialog box, review the list of volumes and snapshots that will be unavailable during the update (if applicable).
 - b. Be sure to stop all applications connected to the affected volumes or snapshots and log off those connections before continuing.
 - c. When ready, click **Close** on the **View Volume Availability** dialog box.
7. On the **Install**, select the check box for **I have reviewed client and the volume availability information (click links below) and taken any necessary actions that are required and am ready to install the software**. The **Install** button will not become active until you select this check box.
8. To proceed with the update, click **Install**.

After you click **Install**, the **Tasks** window appears so you can monitor the progress of the update.
