Sustainability as a catalyst

Helping you achieve business outcomes with sustainable IT solutions

How sustainability leadership benefits you

Organizations leverage sustainability as a catalyst for brand differentiation, game-changing optimization and smarter economics.

Pathways to sustainability

We meet our customers wherever they are on their journey to advance their sustainability agenda — very often connected to digital transformation and data-first modernization initiatives — with pathways to:

- Experts help you look across your hybrid estate to identify inefficiencies — and the needs for every workload with efficiency and optimization are the goal as we look for opportunities to advance your sustainability goals, reduce footprints and energy consumption and costs too.
- Solutions and technology that deliver cost savings, efficiency gains and reduce the environmental impact of IT by enabling organizations to flexibly scale their IT to meet their needs, thereby improving utilization levels and avoiding the waste of overprovisioning.
- Maximize efforts of IT sustainability with a holistic approach to lifecycle management. We help organizations extend the useful life of tech assets, upcycle what they don’t need, and infuse capital back to help fund their transformation and other strategic initiatives.

Innovative low-carbon solutions

- Efficient asset utilization
- Reduced costs
- Reduced overprovisioning
- Responsible sourcing
- Captured asset value

Sustainable IT expertise

- Sustainable IT leadership is a journey, not a one-time event, which requires a comprehensive approach that addresses the entire lifecycle.
- HPE GreenLake customers achieve 53% lower infrastructure energy consumption and require 36% fewer servers for equivalent workload.
- The HPE Apollo 2000 enables up to 50% infrastructure saving compared to 1P/2P rack servers and provides up to 54% higher efficiency than other 4-node systems.
- HPE Financial Services has provided more than $500M infused back into our customers’ budget from upcycling and accelerated migration programs.
