

# WHERE ARE YOU SENDING END-OF-USE ASSETS?

As a Service Provider, once you decide that certain IT assets have reached the end of their utility, you are faced with several decisions for you and your customers. We can help you make the right choices for your budget and sustainability goals.

Take in the big picture and consider the stages of asset recovery and processing.

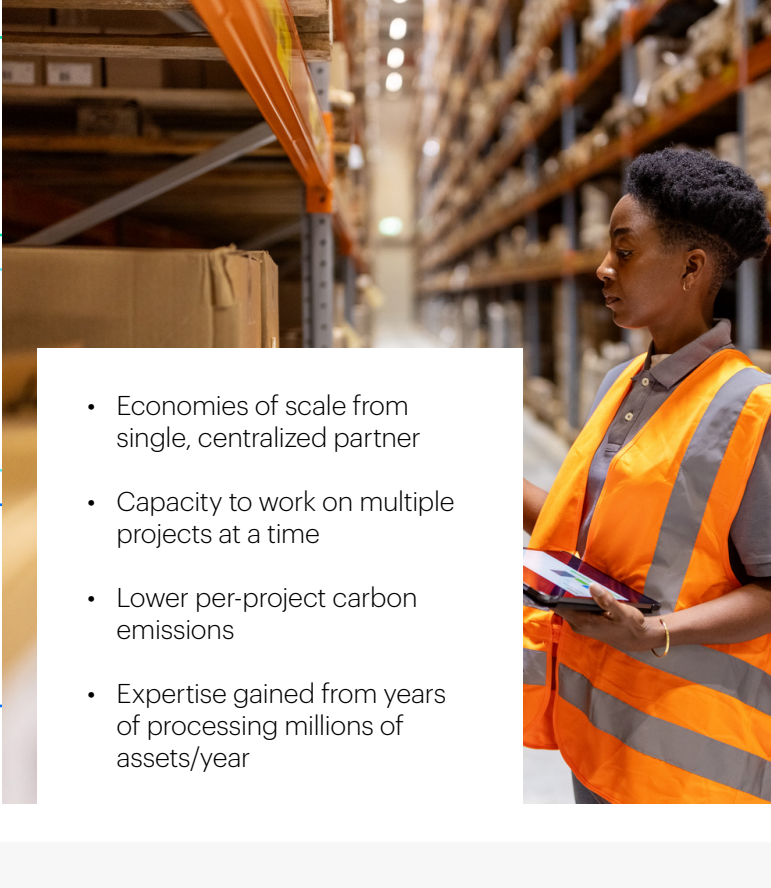

When evaluating potential IT asset disposition (ITAD partners and services, there are important details to consider for yourself and your customers.

When it is time to collect, should you work with a local vendor or a world-class, centrally-located operation? Consider the following:

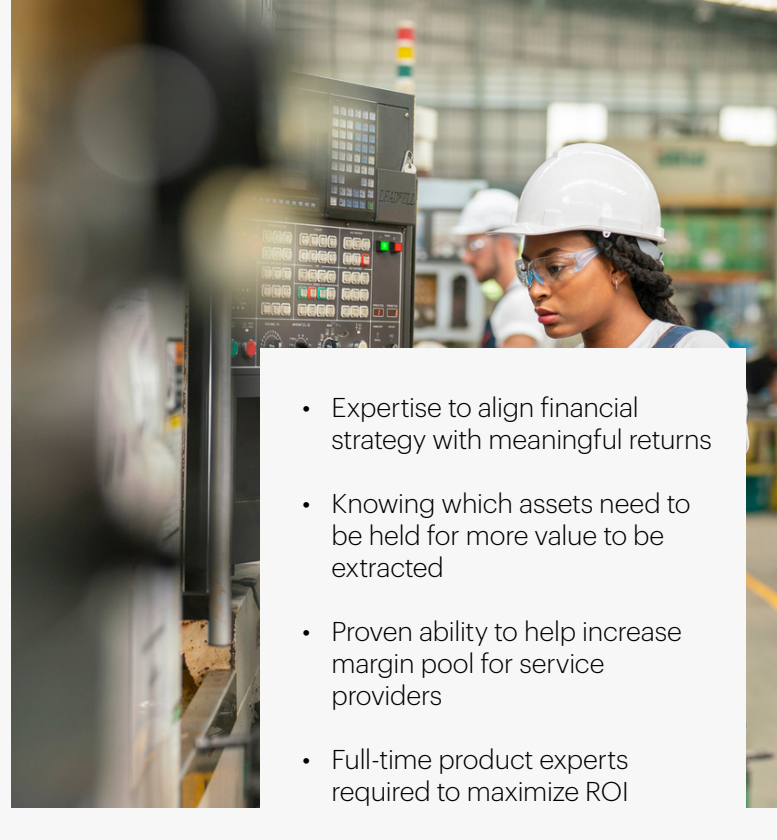

### Location and logistics

- 1 Does the provider optimize their loads to ensure vehicles are at capacity to and from the logistics hub?
- 2 Does the provider optimize their routes/networks for maximum fuel efficiency?
- 3 Does the provider's facility have the scale to process thousands of assets on a daily basis?

- Economies of scale from single, centralized partner
- Capacity to work on multiple projects at a time
- Lower per-project carbon emissions
- Expertise gained from years of processing millions of assets/year

Once your partner has possession of assets, what's their process to help you capitalize on investments? Ask your vendor:

- Expertise to align financial strategy with meaningful returns
- Knowing which assets need to be held for more value to be extracted
- Proven ability to help increase margin pool for service providers
- Full-time product experts required to maximize ROI

### Return on Investment (ROI)

- 1 Do they remarket assets as quickly as possible or time the market appropriately to maximize your return?
- 2 How much equipment do they process annually?
- 3 Do they have expertise with processing assets from multiple hardware providers?

To meet your and your customers' needs, accountability and expertise is key.

### Governance

- 1 Does your provider place a premium on reuse over recycle?
- 2 Is there governance around energy usage at each ITAD facility?
- 3 What types of training and certification are provided to employees who handle assets?

#### Transparency is essential. Ensure that your vendor can provide:

- Documentation and visibility into end-to-end process
- The ability for you to audit facility
- Insight into how many full-time, skilled techs are on-site
- Clear explanation of how counterfeit components are prevented assets/year

## The Circular Economy

### What is the demonstrated commitment to sustainability?

#### Take note of the vendor's sustainability strategy, goals and processes

- Refurbishment rate needs to be at least 85%
- Guarantee that products will be remarketed (not become e-waste)
- Provider must measure all sustainability efforts in terms of carbon emissions, energy, landfill avoidance

## Maximize the value of tech investments and propel sustainability goals with end-of-life assets.
