What's New in this Release

The version IMC iAR 7.3 (E0502) can be installed directly.

The following list all features released in IMC iAR 7.2 (E0402) and later versions.

Features released in IMC iAR 7.3 (E0502)

- Support for setting the default value to be displayed when a text area is null.

Features released in IMC iAR 7.3 (E0501)

- Support for the **TimeSeries Chart** type was added to the Chart Wizard.
- In the Data Adapter Wizard, the **MS SQLServer (2005-2012) (com.microsoft.sqlserver.jdbc.SQLServerDriver)** option was removed from the **JDBC Driver** list.
- Support for some features was removed.
- The report designer allows you to modify a property for multiple elements at a time.
- In the **Dataset and Query Dialog** window, the names of the data source fields that iAR read from an Oracle database were displayed in lower case instead of upper case. For example, `dev_id` is displayed instead of `DEV_ID`.

- When you preview a report containing a variable that uses a deleted group, the system displays an error message that the group cannot be found.

Features released in IMC iAR 7.2 (E0402H01)

- None

Features released in IMC iAR 7.2 (E0402)

- None

Problems Fixed in this Release

IMC iAR 7.3 (E0402) fixes the following problems, including all bugs fixed in IMC iAR 7.2 (E0402) and later versions.

Resolved Problems in IMC iAR 7.3 (E0502)

None

Resolved Problems in IMC iAR 7.3 (E0501)

1. The report designer failed to be started and a **Failed to create the Java Virtual Machine** message was displayed.
2. When you design a report created by using a template, the **When No Data Type** field in the **Properties** area on the right pane displays **No Pages** by default.
3. Java applications that use ACC or contain ACC in the classpath are affected.
4. When you enter the table in the report designer, the main report group is an available reset type for the variable object. However, you cannot select the main report group for a table.
5. A connection error is reported.

Resolved Problems in IMC iAR 7.2 (E0402H01)

Problem 1. 201512210425

- Symptom: The apache common collection software used by iAR is vulnerable.

- Condition: None.

Resolved Problems in IMC iAR 7.2 (E0402)

None

Installation Prerequisites

Machine Specifications

The following are the minimum hardware requirements and supported software programs to run iAR:

PC Requirements

- Hardware
 - Intel Pentium 4 or equivalent processor
 - 1024 MB RAM
 - 20G hard disk space
- Operating system:
 - Windows 7 (All 32-bit and 64-bit Editions)
 - Windows 8 (All 32-bit and 64-bit Editions)
 - Windows Vista (All 32-bit and 64-bit Editions)
 - Windows XP SP2 Professional

- Windows Server 2003 SP1 Datacenter Edition
- Windows Server 2003 SP1 Enterprise Edition
- Windows Server 2003 SP1 Standard Edition
- Windows Server 2003 SP1 Web Edition
- Windows Server 2003 R2 Datacenter Edition
- Windows Server 2003 R2 Enterprise Edition
- Windows Server 2003 R2 Standard Edition
- Windows Server 2003 R2 Web Edition
- Windows Server 2003 SP2 Datacenter Edition
- Windows Server 2003 SP2 Enterprise Edition
- Windows Server 2003 SP2 Standard Edition
- Windows Server 2003 SP2 Web Edition
- Windows Server 2008 SP1 Enterprise Edition
- Windows Server 2012 Standard Edition
- Minimum Screen Resolution:
 - Screen resolution of [1024] x [768] is recommended
- Hardware Support
 - iAR is supported running on 32-bit versions of Windows running on x86 CPUs made by AMD and Intel.
 - iAR is supported running on 64-bit versions of Windows running on x64 CPUs made by AMD and Intel.
- IMC Platform Compatibility
 - IMC Platform version: IMC PLAT 7.3 (E0506).
