

HPE 3PAR SECURITY SOFTWARE SUITE

Storage Device Management Software

OVERVIEW

Are security and performance concerns standing in the way of infrastructure consolidation? HPE 3PAR Security provides secure data center environment and compliance with both internal and external governance policies. HPE 3PAR Security enables secure access and improved storage services for separate applications and user groups, while providing an efficient and cost-effective way to comply with data security requirements such as complying with internal governance policies. This unified security offering allows both internal and external storage service providers a secure consolidated environment while flexibly and efficiently protecting data from intentional or unintentional deletion. It delivers customized and secure storage to multiple administrators, applications, and departments, while retaining the benefits of storage consolidation.

FEATURES

Secure Data Center Environment with Cost-Effective Compliant Data security

HPE 3PAR Security enables secure data center environment with HPE 3PAR Storage system to deliver autonomous, secure, and policy-based systems within a single massively-scalable utility storage system.

Complies with Common Criteria Compliance, FIPS 140-2 Compliant Data-at-Rest Encryption, Security Technical Implementation Guide (STIG) Compliant 3PAR Operating System, Trade Agreement Act Compliant, Section 508 Standards, DIACAP/Risk Management, and Energy Star.

Allows organizations to enjoy the benefits of storage consolidation, including greater resource utilization, reduced administration, centralized backup and reduced energy and floor space consumption.

Once locked, specified storage volumes and copies cannot be affected, even by an HPE 3PAR StoreServ system administrator with the highest user privilege level.

Improved Quality-of-Service (QoS) Levels

HPE 3PAR Security enables a policy-based, secure data center environment that preserves the benefits of massively distributing and sharing each application workload across all system resources (ports, processors, cache, loops, and disk drives).

Secure, virtual implementation means that authorized users only have access to their domains and logical elements to which they have been granted access by an administrator, allowing you to deliver customized and secure storage by department or application.

Ideal for end users, internal or external service providers that must enable secure, consolidated, independent storage services to multiple administrators, applications, departments, and customers.

Control your Security and Retention Simply and Easily

HPE 3PAR Security enables a user-configurable retention period that enables individual storage volumes or copies to be locked for a specified period of time.

Prevents deliberate or inadvertent presentation of a volume outside its virtual domain, thereby protecting authorized administrators against errors and aiding compliance efforts.

Enables simple storage administrative tasks and monitoring tools to be turned over to system and application administrators in a "self-service" model that drives time and cost savings.
