Data sheet

HPE IMC Network Traffic Analyzer Software

What's new

- Monitor, enhance, and troubleshoot networks.
- Support for sFlow, NetFlow, and NetStream.
- Granular insight of applications, users, and ports.
- Real-time and historical reporting on network application usage.

Overview

HPE IMC Network Traffic Analyzer (NTA) Software is an Intelligent Management Center (IMC) optional module that integrates network layers 4 through 7 monitoring into the IMC base network management platform. IMC NTA Software uses the instrumentation in network devices like routers and switches to provide real-time and historical reporting on network application usage.

You can tailor IMC NTA Software data collection and reporting capabilities to meet specific reporting needs and leverage the data for better planning, monitoring, and enhancing of network capabilities.

Features

Gain Application and User Insight Through Comprehensive Network Monitoring

The HPE IMC Network Traffic Analyzer (NTA) Software provides a breakdown of how network traffic is being consumed by different applications and users.

It provides intelligent traffic analysis of port and application mapping, allowing you to understand which interfaces are sending traffic and what type of traffic.

With IMC NTA Software you can enforce security policies, identify suspicious behavior, provide quality of service, and account for network usage, all while reducing network costs.

Integrated Network Monitoring From Layer 4 Through Layer 7

The HPE IMC Network Traffic Analyzer (NTA) Software monitors using various flow protocols (sFlow, NetFlow, and NetStream) to discover any hot-spots or areas experiencing anomalies.

Provides visibility of multilayer switched and routed environments and delivers rapid identification and resolution of network threats.

Utilize the vendor-agnostic HPE IMC Virtualization Monitor (vMon) Software option to analyze network traffic in a virtual environment, below the hypervisor.

HPE Services

No matter where you are in your transformation journey, you can count on HPE Services to deliver the expertise you need when, where and how you need it. From strategy and planning to deployment, ongoing operations and beyond, our experts can help you realize your digital ambitions.

Advisory & Professional services

Experts can help you map out your path to hybrid cloud and optimize your operations.

Managed services

HPE runs your IT operations, giving you unified control, so can focus on innovation.

Support services

Optimize your entire IT environment and drive innovation. Manage day-to-day IT operational tasks while freeing up valuable time and resources.

— **HPE Complete Care Service:** a modular service designed to help optimize your entire IT environment and achieve agreed upon IT outcomes and business goals. All delivered by an assigned team of HPE experts.

— **HPE Tech Care Service:** the operational service experience for HPE products. The service provides access to product specific experts, an AI driven digital experience, and general technical guidance to help reduce risk and search for ways to do things better.

— **HPE Multivendor Services:** Single point of accountability for managing on-site hardware and software support for multivendor products. HPE experts help manage your IT across technologies and platforms for HPE and non-HPE technologies, acting as the single point of contact for your IT operational needs.

Lifecycle Services

Address your specific IT deployment project needs with tailored project management and deployment services.

HPE Education Services

Training and certification designed for IT and business professionals across all industries. Create learning paths to expand proficiency in a specific subject. Schedule training in a way that works best for your business with flexible continuous learning options

Defective Media Retention is optional and allows you to retain Disk or eligible SSD/Flash Drives replaced by HPE due to malfunction.

GreenLake

GreenLake is the cloud to run and manage your entire hybrid landscape—private, public, and edge. It helps you to:

— Streamline IT Operations across compute, storage, and networking without the chaos

— Unify and secure data, as you move faster

— Accelerate AI, from pilot to production

The result: greater operational efficiency, lower TCO, and faster AI delivery—all from one unified, intelligent platform built for today's hybrid enterprise.
