

HPE IMC ORCHESTRATOR NETWORK NODE ADD-ON E-LTU (JL851AAE)

Intelligent Management Software

WHAT'S NEW

- Unified, closed-loop orchestration solution that includes network architecture design, simulation, deployment, and operations.
- Automated, role-based deployment for underlay and overlay network fabric and automated service provisioning for VXLAN L2/L3 services.
- Support for standard protocols, open

OVERVIEW

The HPE IMC Orchestrator and Analyzer is an IMC solution that is designed to simplify network operations and management through orchestration, automation, and analytical capabilities. It is best suited for environments that are required to scale rapidly due to exponentially growing traffic from cloud, mobile, big data applications, and IoT .

The HPE IMC Orchestrator and Analyzer accelerates service delivery and enhances operational efficiency through its automated deployment capabilities for underlay and overlay

interfaces, and extensible programmability for easy integration with third-party or cloud-based management platforms.

- AI-enabled network health monitoring with telemetry and visual dashboards that allow accurate fault detection, risk prediction, and analysis for faster issue resolution.
- Advanced data collection capabilities that offer visibility into application performance and user experience for near real-time network optimization, enabling seamless end-user experience and uptime.

network, service provisioning for VXLAN L2/L3 services, multi-tenant provisioning, and application performance insights with application telemetry. It also provides analytics and AI capabilities to offer a holistic view of network health for faster troubleshooting and issue resolution.

FEATURES

Automated Deployment and Service Provisioning

HPE IMC Orchestrator and Analyzer provides a unified, closed-loop orchestration solution that encompasses network design, simulation, deployment, and operations to enhance operational efficiency.

Supports automated, role-based deployment of underlay and overlay network fabric to enable rapid expansion of the network.

Accelerated service delivery and increased scalability are provided through automated service provisioning for VXLAN L2/L3 services.

Multi-tenant provisioning and better resource management using multiple HPE IMC Orchestrator and Analyzer instances to deploy Ethernet Virtual Interconnect (EVI) with VXLAN and MP-BGP EVPN.

Extensive Programmability and Flexibility

HPE IMC Orchestrator and Analyzer supports an extensive set of standard protocols including EVPN, VXLAN, OVSD, NETCONF, gRPC, and ERSPAN, making it easy for customers to integrate with third-party network management and cloud platforms for unified management.

Use of northbound RESTful APIs and standard southbound interfaces including OpenFlow, NETCONF and OVSD enable a high degree of programmability and flexibility.

Offers a great degree of openness and control plane independence at the switch level that allows administrators the flexibility to customize network operations based on business requirements.

Supports automated provisioning of a variety of compute resources such as virtual, bare metal, and containers with the help of integrations like OpenStack®.

AI-based Network Management

HPE IMC Orchestrator and Analyzer supports application telemetry with technologies such as gRPC and ERSPAN for precise data capture to the frequency of milliseconds. Distributed computing engines help achieve online and offline data analysis.

Leverages AI and machine-learning algorithms for near real-time fault detection, risk prediction, and trend analysis to significantly improve the troubleshooting experience and issue resolution time.

Provides a visual network representation of underlay and overlay topologies with correlation to offer a holistic view to network administrators for faster issue identification.

Delivers insights into application performance and provides application traffic visualization to monitor and enhance end-user experience and uptime.

Enhanced Security

HPE IMC Orchestrator and Analyzer provides on-demand security resource scheduling. Security policies can be dynamically established to meet business security requirements.

Flexible service chaining and micro segmentation offer enhanced security control and better utilization of network resources.

Technical specifications

HPE IMC Orchestrator Network Node Add-on E-LTU

Product Number	JL851AAE
Browser supported	Google Chrome 55 or a later version
Software (required)	Red Hat Enterprise Linux 7.6
Minimum system requirements	Processor : x86-64 (Intel 64/AMD 64) 16 cores 2.0 GHz or above Memory : 128 GB or above Drives must be configured in RAID 1 or 10.
Technical notes	To avoid unrecoverable system failures caused by unexpected power failures, usage of a RAID controller that supports power failure protection is recommended. As a best practice, configuring NTP for time synchronization and ensuring the devices synchronize to the same clock source is recommended.

HPE POINTNEXT SERVICES

[HPE Pointnext Services](#) brings together technology and expertise to help you drive your business forward and prepare for whatever is next.

Operational Services from HPE Pointnext Services

[HPE Pointnext Tech Care](#) provides fast access to product-specific experts, an AI-driven digital experience, and general technical guidance to help enable constant innovation. We have reimagined IT support from the ground up to deliver faster answers and greater value. By continuously searching for better ways to do things—as opposed to just fixing things that break—HPE Pointnext Tech Care helps you focus on achieving your business goals.

[HPE Pointnext Complete Care](#) is a modular, edge-to-cloud IT environment service that provides a holistic approach to optimizing your entire IT environment, and achieving agreed upon IT outcomes and business goals through a personalized and customer-centric experience. All delivered by an assigned team of HPE Pointnext Services experts.

HPE Integration and Performance Services help you customize your experience at any stage of your product lifecycle with a menu of services based on individual needs, workloads, and technologies.

- Advise, design, and transform
- Deploy
- Integrate and migrate
- Operate and improve
- Financial Services
- Greenlake Management Services
- Retire and sanitize
- IT Training and personal development

Other related services

[HPE Education Services](#) delivers a comprehensive range of services to support your people as they expand their skills required for a digital transformation. Consult your HPE Sales Representative or Authorized Channel Partner of choice for any additional questions and support options.

Defective Media Retention is optional and allows you to retain Disk or eligible SSD/Flash Drives replaced by HPE due to malfunction.

HPE GREENLAKE

[HPE Greenlake](#) is HPE's market-leading IT as-a-Service offering that brings the cloud experience to apps and data everywhere – data centers, multi-clouds, and edges – with one unified operating model. HPE GreenLake delivers public cloud services and infrastructure for workloads on premises, fully managed in a pay per use model.
