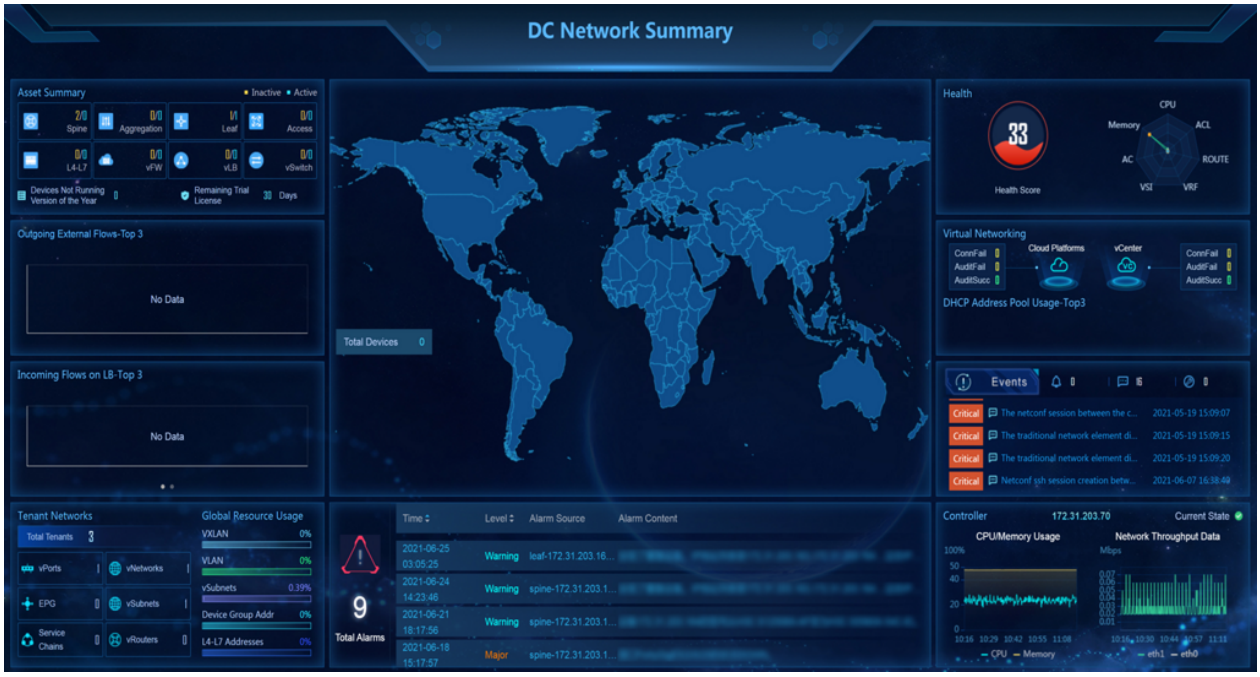
HPE IMC Orchestrator and Analyzer



What's new

- Unified, closed-loop orchestration solution that includes network architecture design, simulation, deployment, and operations.
- Automated, role-based deployment for underlay and overlay network fabric and automated service provisioning for VXLAN L2/L3 services.
- Support for standard protocols, open interfaces, and extensible programmability for easy integration with third-party or cloud-based management platforms.
- AI-enabled network health monitoring with telemetry and visual dashboards that allow accurate fault detection, risk prediction, and

Overview

The HPE IMC Orchestrator and Analyzer is an IMC solution that is designed to simplify network operations and management through orchestration, automation, and analytical capabilities. It is best suited for environments that are required to scale rapidly due to exponentially growing traffic from cloud, mobile, big data applications, and IoT .

The HPE IMC Orchestrator and Analyzer accelerates service delivery and enhances operational efficiency through its automated deployment capabilities for underlay and overlay network, service provisioning for VXLAN L2/L3 services, multi-tenant provisioning, and application performance insights with application telemetry. It also provides analytics and AI capabilities to offer a holistic view of network health for faster troubleshooting and issue resolution.

analysis for faster issue resolution.

– Advanced data collection capabilities that offer visibility into application performance and user experience for near real-time network optimization, enabling seamless end-user experience and uptime.

Features

Automated Deployment and Service Provisioning

HPE IMC Orchestrator and Analyzer provides a unified, closed-loop orchestration solution that encompasses network design, simulation, deployment, and operations to enhance operational efficiency.

Supports automated, role-based deployment of underlay and overlay network fabric to enable rapid expansion of the network.

Accelerated service delivery and increased scalability are provided through automated service provisioning for VXLAN L2/L3 services.

Multi-tenant provisioning and better resource management using multiple HPE IMC Orchestrator and Analyzer instances to deploy Ethernet Virtual Interconnect (EVI) with VXLAN and MP-BGP EVPN.

Extensive Programmability and Flexibility

HPE IMC Orchestrator and Analyzer supports an extensive set of standard protocols including EVPN, VXLAN, OVSDB, NETCONF, gRPC, and ERSPAN, making it easy for customers to integrate with third-party network management and cloud platforms for unified management.

Use of northbound RESTful APIs and standard southbound interfaces including OpenFlow, NETCONF and OVSDB enable a high degree of programmability and flexibility.

Offers a great degree of openness and control plane independence at the switch level that allows administrators the flexibility to customize network operations based on business requirements.

Supports automated provisioning of a variety of compute resources such as virtual, bare metal, and containers with the help of integrations like OpenStack®.

AI-based Network Management

HPE IMC Orchestrator and Analyzer supports application telemetry with technologies such as gRPC and ERSPAN for precise data capture to the frequency of milliseconds. Distributed computing engines help achieve online and offline data analysis.

Leverages AI and machine-learning algorithms for near real-time fault detection, risk prediction, and trend analysis to significantly improve the troubleshooting experience and issue resolution time.

Provides a visual network representation of underlay and overlay topologies with correlation to offer a holistic view to network administrators for faster issue identification.

Delivers insights into application performance and provides application traffic visualization to monitor and enhance end-user experience and uptime.

Enhanced Security

HPE IMC Orchestrator and Analyzer provides on-demand security resource scheduling. Security policies can be dynamically established to meet business security requirements.

Flexible service chaining and micro segmentation offer enhanced security control and better utilization of network resources.

Technical specifications	HPE IMC Orchestrator and Analyzer
Software (required)	Red Hat Enterprise Linux 7.6
Browser supported	Google Chrome 55 or a later version
Technical notes	To avoid unrecoverable system failures caused by unexpected power failures, usage of a RAID controller that supports power failure protection is recommended. As a best practice, configuring NTP for time synchronization and ensuring the devices synchronize to the same clock source is recommended.
Minimum system requirements	Processor : x86-64 (Intel 64/AMD 64) 16 cores 2.0 GHz or above Memory : 128 GB or above Drives must be configured in RAID 1 or 10.

HPE Services

No matter where you are in your transformation journey, you can count on HPE Services to deliver the expertise you need when, where and how you need it. From strategy and planning to deployment, ongoing operations and beyond, our experts can help you realize your digital ambitions.

Advisory & Professional services

Experts can help you map out your path to hybrid cloud and optimize your operations.

Managed services

HPE runs your IT operations, giving you unified control, so can focus on innovation.

Support services

Optimize your entire IT environment and drive innovation. Manage day-to-day IT operational tasks while freeing up valuable time and resources.

— **HPE Complete Care Service:** a modular service designed to help optimize your entire IT environment and achieve agreed upon IT outcomes and business goals. All delivered by an assigned team of HPE experts.

— **HPE Tech Care Service:** the operational service experience for HPE products. The service provides access to product specific experts, an AI driven digital experience, and general technical guidance to help reduce risk and search for ways to do things better.

— **HPE Multivendor Services:** Single point of accountability for managing on-site hardware and software support for multivendor products. HPE experts help manage your IT across technologies and platforms for HPE and non-HPE technologies, acting as the single point of contact for your IT operational needs.

Lifecycle Services

Address your specific IT deployment project needs with tailored project management and deployment services.

HPE Education Services

Training and certification designed for IT and business professionals across all industries. Create learning paths to expand proficiency in a specific subject. Schedule training in a way that works best for your business with flexible continuous learning options

Defective Media Retention is optional and allows you to retain Disk or eligible SSD/Flash Drives replaced by HPE due to malfunction.

GreenLake

GreenLake is the cloud to run and manage your entire hybrid landscape—private, public, and edge. It helps you to:

— Streamline IT Operations across compute, storage, and networking without the chaos

— Unify and secure data, as you move faster

— Accelerate AI, from pilot to production

The result: greater operational efficiency, lower TCO, and faster AI delivery—all from one unified, intelligent platform built for today's hybrid enterprise.

Parts and Materials: HPE will provide HPE-supported replacement parts and materials required to maintain the covered hardware.

Parts and components that have reached their maximum supported lifetime and/or the maximum usage limitations as set forth in the manufacturer's operating manual, product quick-specs, or the technical product data sheet will not be provided, repaired, or replaced as part of these services.

Image may differ from the actual product.
