

HPE PERSISTENT STORAGE FOR CONTAINERS

Storage Device Management Software

WHAT'S NEW

- Dynamic Storage provisioning for Kubernetes with volume attributes such as thin, compressed, deduplicated or fully provisioned volumes across multiple HPE 3PAR arrays
- Snapshots and clone of container data volumes with retention, expiration, as well as scheduling of snapshots
- Per data volume QoS and secure multi-

OVERVIEW

Containers enable portability, agility and accelerated application delivery. Stateful and mission-critical containerized applications require reliable data storage with high performance and availability. The integration of HPE 3PAR with Docker, Kubernetes, Red Hat OpenShift, Mesos and SuSE CaaS enables self-service dynamic storage provisioning, QoS, multi-tenancy, snapshots, clones, replication of data volumes on a highly available storage platform. The integration also enables migrating legacy data volumes into containers paving way for modernizing traditional workloads with containers. The

tenancy for running multiple Kubernetes clusters on same array

- Synchronous replication with automated failover with HPE 3PAR peer persistence and , asynchronous replication of container data volumes
- Ansible-based automated installation of Plug-in in OpenShift and standalone Docker environments. Import of legacy data volumes into containers
- Expanded ecosystem including Kubernetes 1.8 and higher , Red Hat OpenShift 3.7, 3.9 and 3.10, Docker EE 2.0, SuSE CaaS/CAP v3

IT Ops teams can deliver multi-tenant Container-as-a-Service (CaaS) offerings for tenants to on-board workloads with clear separation of data enabled by Virtual domains. The integration is made possible with HPE 3PAR Volume Plug-in for Docker, HPE FlexVolume driver and dynamic provisioner for Kubernetes. HPE 3PAR is Docker certified and a Red Hat OpenShift Primed partner.

FEATURES

Single Persistent Storage Platform for Containerized Traditional and Cloud-native Workloads

Deep integration into Docker, Kubernetes, Red Hat OpenShift and SuSE CaaS/CAP means you can deploy both traditional and containerized workloads on same HPE 3PAR and avoid multiple storage silos.

Automatically convert your legacy data volumes to containerized volumes managed with any container platforms to enable modernization of traditional applications to containers.

Protect your containerized application workloads using integrated snapshots, clones and replication of data volumes. Synchronously replicated with automated failover of container data volumes or asynchronously replicate container data volumes to secondary site.

Empower your Application and DevOps Teams with Self-service Storage Access for Containerized Apps

Dynamically provision storage on HPE 3PAR using Kubernetes StorageClass for policy-based storage management.

Avoid development and test teams using stale or synthetic data sets. Create instant snapshots or clones of production data volumes for developers and test teams to accelerate application development and delivery.

Automatic cleanup of snapshot copies used by development and test teams ensures no unnecessary storage space is consumed on storage.

Simplify Container Operations

Deliver right performance to right application with per volume QOS.

Deploy secure multiple multi-tenant Kubernetes clusters on a single HPE 3PAR platform with clear separation of tenant data.

Deploy containerized workloads across multiple HPE 3PAR arrays or across multiple domains within single array.

Ansible based automated plug-in installation on standalone Docker and Red Hat OpenShift environments simplifies management on day 0 and beyond.

Technical specifications

HPE Persistent Storage for Containers

Warranty

Hewlett Packard Enterprise warrants only that the software media will be free of physical defects for a period of ninety (90) days from delivery. For more information about the Hewlett Packard Enterprise Global Limited Warranty and Technical Support, visit: <http://h20564.www2.hp.com/hpsc/wc/public/home>.

HPE POINTNEXT SERVICES

[HPE Pointnext Services](#) brings together technology and expertise to help you drive your business forward and prepare for whatever is next.

Operational Services from HPE Pointnext Services

[HPE Pointnext Tech Care](#) provides fast access to product-specific experts, an AI-driven digital experience, and general technical guidance to help enable constant innovation. We have reimagined IT support from the ground up to deliver faster answers and greater value. By continuously searching for better ways to do things—as opposed to just fixing things that break—HPE Pointnext Tech Care helps you focus on achieving your business goals.

[HPE Pointnext Complete Care](#) is a modular, edge-to-cloud IT environment service that provides a holistic approach to optimizing your entire IT environment, and achieving agreed upon IT outcomes and business goals through a personalized and customer-centric experience. All delivered by an assigned team of HPE Pointnext Services experts.

HPE Integration and Performance Services help you customize your experience at any stage of your product lifecycle with a menu of services based on individual needs, workloads, and technologies.

- Advise, design, and transform
- Deploy
- Integrate and migrate
- Operate and improve
- Financial Services
- Greenlake Management Services
- Retire and sanitize
- IT Training and personal development

Other related services

[HPE Education Services](#) delivers a comprehensive range of services to support your people as they expand their skills required for a digital transformation. Consult your HPE Sales Representative or Authorized Channel Partner of choice for any additional questions and support options.

Defective Media Retention is optional and allows you to retain Disk or eligible SSD/Flash Drives replaced by HPE due to malfunction.

HPE GREENLAKE

[HPE Greenlake](#) is HPE's market-leading IT as-a-Service offering that brings the cloud experience to apps and data everywhere – data centers, multi-clouds, and edges – with one unified operating model. HPE GreenLake delivers public cloud services and infrastructure for workloads on premises, fully managed in a pay per use model.
