HPE XP P9000 AUTO LUN SOFTWARE

Storage Device Management Software

WHAT'S NEW

- Significantly lower your IT expenditure with Meter-based Term licenses by purchasing software only for the period you use them

OVERVIEW

HPE XP P9000 Auto LUN Software provides automatic monitoring and load balancing for your HPE XP P9500 Storage. It makes the most efficient use of your disk arrays by moving high-priority tasks to underutilized volumes, replicating volumes for backup and recovery, and viewing the health of your arrays. You set performance goals and limits, and XP P9000 Auto LUN does the rest. It proposes a migration plan and estimates how much your storage performance will improve when it's done. XP P9000 Auto LUN lets you evaluate disk array usage and determine whether resources are overloaded or out of balance. Use its easy-to-follow menus to define when data is collected and arrays are monitored. Use up

to 90 days of stored historical data to spot trends and create up-to-the-minute reports. You can export data to a spreadsheet for further analysis. If resources are overloaded, XP P9000 Auto LUN Software will create a plan to move volumes, then stands by for your approval to make changes.

FEATURES

Improve Performance with Rebalanced Resource Utilization

Obtain usage statistics for disk drives, logical volumes, processors, and other resources in your HPE XP P9500 Storage so that you can keep your application working at peak efficiency.

HPE XP P9000 Auto LUN Software allows you to migrate data from overloaded resources to underutilized resources, while your application continues to access the data. Performance is improved without disruption.
